Question 1 – MCQ

You are looking at a 30 foot tall telephone pole from a distance of 60 feet such that your eye level is half-way up the pole, and you are looking at that point on the pole. What is the visual angle subtended by the distal stimulus?

- A. $\arctan(60/30)$
- B. $\arctan(15/60)$
- C. $2 * \arctan(60/15)$
- D. $2 * \arctan(30/60)$
- E. $2 * \arctan(15/60)$

Question 2 - Short Answer

Suppose you are an artist creating a painting on a flat canvas. What are some ways you can add perceived depth to your painting? Please explain how each cue you employ would help add perceived depth. Also indicate which monocular depth cues you cannot use in the painting to add a sense of perceived depth?

Question 3 - MCQ

What kind of vision difficulty do people with myopia (near-sightedness) have when their vision is uncorrected?

- A. When looking at an object that is close to them, the image of the object is in focus behind the retina.
- B. When looking at an object that is far from them, the image of the object is in focus in front of the retina.
- C. When looking at an object that is far from them, the image of the object is in focus behind the retina.
- D. When looking at objects that is between their near and far points, they cannot accommodate to bring the object into focus.
- E. None of the above.

Good luck on the exam!
